DETAILED ACTION

Response to Amendment

1. By way of the amendment filed with the RCE of 12/3/2009: claims 1, 2, 6, 7, 9, and 14 are amended, claims 3, 5, 8, and 10-12 are cancelled, claims 4 and 13 were previously presented, and claims 15-20 are new.

Claim Rejections - 35 USC § 112

2. The previous rejections of claims 1, 2, 4, 13, and 14 under 35 USC 112 second paragraph are withdrawn.

Allowable Subject Matter

3. Claims 1, 2, 4, 6, 7, 9, and 13-20 are allowed.

4. The following is an examiner's statement of reasons for allowance:

5. The inventive feature that is not anticipated or made obvious by the prior art is the calculation of the energy needed to fuse the selected powder area before fusing begins (see the last line of claim 1, the last two lines of claim 6, and the last three lines of claim 15).

6. The closest prior art on record is Andersson et al (WO 01/81031, already of record). Andersson et al teaches the use of a temperature sensor that is connected to a feedback loop, along with the radiation source, for controlling the temperature of the layer that is being fused. This is a common theme in the prior art as can also be seen in for example: U.S. Patent 5427733 and U.S. PGPubs 2003/0059334 and 2004/0200816. The difference between the prior art and the instant invention is that the instant invention does not use a sensor based feedback loop during fusing. The instant

Art Unit: 1791

invention only uses a calculation that is made before the start of the powder fusion that is based on the energy output from the radiation so that the selected area is maintained at a defined working temperature.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
